

I don't know what we would have done without the support of Paws 4 A Cure! Our dog, Tashi, a 12 yr old brindle pit, was diagnosed with a UTI & bladder stones. It was critical that she receive care ASAP as the stones would very likely end up blocking her urethra and cause a slew of other problems resulting in euthanasia. If we had not found a caring vet, and had the support of Paws 4 A Cure we would not have been able to get her the surgery she needed. Thankfully, Tashi got the surgery, had TWO HUGE stones removed and 2 polyps as well. She is now on a special diet and drinking filtered water. Tashi just had her post surgery check up and everything looks GREAT! She may be old, but she's a trooper with an excellent heart and good strong lungs and is expected to be around a while longer yet with us! We are grateful to Paws 4 A Cure for their help! Please, support them if you can, so more families can remain in tact and keep their loving furbabies happy, healthy, and whole! :)

With Greatest Gratitude, Rachel
